Title:	Annual Report on Deceased Organ Donation, 2013-14
---------------	---

Purpose:	To update the Board of Directors on deceased organ donation within the trust.
-----------------	---

Summary:	The trust continues to perform very well in organ donation. The ICU team refer 100% of potential donors after brain death (DBD) and 95% of potential donors after cardiac death (DCD). Consent rates were 100% for DBD and 55% for DCD, with a total of 32 consents. 22 of these patients proceeded to donation. This is the largest number of donors that the trust has had in any year, and resulted in 63 patients being transplanted. Our data compares excellently with national data.
