Risk of harm - five point action plan

1. Have you got the right drugs?

- speak to the patient, relative or GP

2. Did the patient bring their medications with them?

- if not, get them urgently from home - ask the friends or relatives. No joy? Get them ASAP from pharmacy

3. Get the dose and timings right

- sounds simple, right? Wrong! It really, really matters.

4. Can the patient take their own medications?

- why not ask them?

5. Is the patient NBM?

- to follow the protocol — follow the link*
